## Tips and Tricks

### *Drone*

In case you carry drones with you on your travels. Don't forget to check the airport check-in rules regarding batteries. In almost all the countries I've traveled to, there is no problem if the batteries don't exceed **100Wh**. But it will be better to check the rules, as not all countries are the same. It wouldn't be good if we had to leave some material behind because we didn't play by the rules. Another point to be aware of is the maximum flight altitude, as these vary from country to country. For example, in **Europe**, the maximum altitude is **130 mts**, while in **Singapore** it is **600 ft(61 mts)**.

## Safety

### *Before you ride, check it out*

Make sure your motorcycle is in good condition before you start riding. A small operation takes only 10-15 minutes, but saves precious time while driving, which decreases accident risk.

Here are a few things you should take into consideration:

- Make sure there are no loose parts, fluids, or damaged parts on the motorcycle.
- Inspect the tire pressure. On the road, incorrect tire pressure completely changes the behavior of the motorcycle.
- After mounting the motorcycle, check that the mirrors are in the correct position before start driving. Performing this operation while driving can result in an accident.
